

Packaging Product Solutions

Packaging & Display Application

Packaging Solutions

Manufacturers across Canada use Plasti-Fab[®] expanded polystyrene (EPS) cushion packaging material solutions to protect their products during shipping and handling.

Plasti-Fab EPS packaging material has the proven track record of providing packaging solutions for a range of products from fragile consumer products to heavy industrial products. It offers the resilience to absorb

shocks and the impacts that can occur during shipping, and assists in preventing product damage or breakage during the shipping and handling process.

Plasti-Fab's professional service and expertise ensures that the right product and end user requirements are selected to meet all our customers' packaging needs.

Our customers depend on us for product expertise and on time delivery.

Plasti-Fab has the expertise to provide its customers with the right foam products for packaging solutions.

Fabricated Packaging Solutions

Our EPS products are used as fabricated packaging material to protect the products they create during the shipping and handling process. Our EPS packaging products are cut to custom sizes and shapes to encase the product within its box, or simply to protect while packaged.
